

1 ABSTRACT OF THE DISCLOSURE

2
3 A doorbell arrangement identifies visitors. The doorbell arrangement includes a user
4 interface that allows a visitor to enter his visitor or user code. The doorbell system is
5 configured to identify visitors by recognizing user codes. The doorbell system generates
6 response signals specific to each visitor. The response signals include audible sounds such as
7 musical tones or voice recordings. The response signals also include radio frequency signals
8 transmitted to remote locations. The doorbell arrangement may include a computer such as a
9 personal computer.
